

## Caiman Accessories

### Modular components & accessories specially designed for Caiman helmets

**THE CAIMAN HEAD SYSTEM SUITE** is hardwired with the hard-won experience of Special Operations Forces (SOF) users. Developed in collaboration with a wide range of SOF operators and stakeholders, the end-result is a truly unconventional helmet suite that reflects this radical joint effort: skeletonized, modular solutions where each component has been rigorously conceived, engineered, and tested. The Caiman Head System features two mandible guards (ballistic and bump) and two visors (NVG arm and fixed arm). These modular components and accessories optimize the Caiman system for a wide range of operations, including boat, vehicle, HALO/HAHO, mountain, river, and direct action missions.

Both mandible guards and both visors are compatible with all Caiman Helmet Systems—the Caiman Hybrid Helmet, the Caiman Ballistic Helmet, and the Caiman Bump Helmet.

CAIMAN BUMP MANDIBLE GUARD

CAIMAN BALLISTIC MANDIBLE GUARD

CAIMAN FIXED ARM VISOR

CAIMAN NVG ARM VISOR

The Caiman Mandible Guards come in three sizes (SM/MD; LG; XL/XXL) aligning with the five Caiman helmet sizes and feature an ultra-slim, ergonomic fit that ensures unencumbered head movement and maximum field-of-vision. The mandible guards integrate with side rails through a slide, latch, and lock system and are designed to be both tough and flexible—allowing users to unclip and swing the mandible guard wide open.

The Caiman Visors feature Revision's industry-leading anti-fog and anti-scratch coatings, provide robust eye and face protection, and give users multiple options for integrating with modular systems and headborne accessories—the Fixed Arm Visor attaches to the Wilcox® L4 Series Shroud and the NVG Arm Visor attaches to the Wilcox L4 G24 Mount.
