

ERGOCTO **Xe**™

ACTIVATION KEYPAD

PRODUCT OVERVIEW

The Wilcox Line of ERGOCTO™ Xe™ Activation Keypads is the next generation accessory that is ergonomically positioned for the user to control Wilcox’s new line of “Xe” lasers and fire control devices. The ERGOCTO Xe Activation Keypad is mounted directly to any MIL-STD-1913 rail and can be positioned in-between the quadrant rails of most rifle handguards thereby preventing loss of the weapon grip when activating a device. The attachment mechanism of the ERGOCTO Xe Activation Keypad features a very low-profile stance on the rail which does not interfere with the user’s natural positioning of the pressure pad when handling a weapon. The ERGOCTO Xe Activation Keypad is available in two configurations: single cable configuration that connects securely to Wilcox laser products or a dual connector cable configuration that connects to the Wilcox Laser products and the other connects to any Surefire flashlight product that has the tail-cap interface.

FEATURES & BENEFITS

- An ambidextrous design allows the attachment to either side of the weapon
- The cables can be mounted facing forward or backward to accommodate desired laser and/or flashlight position
- The 3 control buttons on the pressure pad are distinctive in shape and allow for identification of each button without looking at the control pad
- The 3 control buttons are equally spaced, eliminating interference while wearing gloves
